HACKATHON QUESTION

DURATION: 2 HOURS	MODE: INDIVIDUAL	CHALLENGES: 25

Challenge brief: Select the assigned business problem and independently design, develop and demonstrate a working full-stack application. The case studies are organized around the four enterprise industry domains listed below.

DOMAIN 1 | BANKING, FINANCIAL SERVICES & INSURANCE (BFSI)

01 PayFlow – Digital Payments & Transfers

Build a digital payments application where users can manage beneficiaries, initiate money transfers, view transaction history and track payment status.

02 LoanTrack – Loan Application & Approval

Create a loan platform where customers explore loan products, submit applications and supporting documents, while loan officers review applications and update approval status.

03 InsureCare – Insurance Policy & Claims

Develop an insurance portal where customers view policy options, purchase or renew policies, submit claims and track claim progress.

04 SmartSpend – Personal Finance Manager

Build a finance application that lets users record income and expenses, create monthly budgets, categorize spending and view summaries of their financial activity.

05 BankAssist – Customer Service Request Portal

Create a banking service portal where customers raise requests such as address changes, cheque-book requests or card issues, and track each request until resolution.

06 FraudAlert – Suspicious Transaction Review

Develop a transaction monitoring dashboard that flags unusual transactions using simple configurable rules and allows authorized reviewers to investigate and update case status.

07 WealthWise – Investment Portfolio Tracker

Build an application where users maintain a portfolio of investment entries, track quantities and purchase values, and view a consolidated portfolio summary.

DOMAIN 2 | MANUFACTURING & CONSUMER SERVICES

08 FactoryPulse – Production Monitoring

Create a production tracking application where supervisors record daily production, monitor planned versus completed output and flag delays or quality issues.

09 StockPilot – Inventory & Reorder Management

Build an inventory system where staff manage product stock, record incoming and outgoing items, set reorder levels and receive low-stock alerts.

10 QualityCheck – Product Inspection Tracker

Develop a quality inspection application where factory staff record inspection results, report defects, attach notes and track corrective actions.

11 ServicePro – Appliance Repair Management

Create a consumer service portal where customers register appliance complaints, book service visits, receive repair estimates and follow repair progress.

12 OrderDesk – Distributor Order Management

Build a business ordering portal where retailers browse a product catalogue, place bulk orders, view order status and review invoices.

13 WarrantyHub – Product Warranty Registration

Develop a portal where customers register purchased products, store warranty details, raise service claims and track warranty support requests.

DOMAIN 3 | HEALTHCARE & RETAIL

14 CareBook – Clinic Appointment Portal

Build a clinic application where patients view doctors, book appointments, manage upcoming visits and access their appointment history.

15 MediStore – Pharmacy Ordering

Create an online pharmacy where customers search medicines and healthcare products, upload prescriptions when required, place orders and track fulfilment.

16 LabConnect – Diagnostic Test Booking

Develop a diagnostic services platform where users browse lab tests, book test slots, view booking status and access reports made available by the lab.

17 RetailCart – Multi-Category Shopping

Build an online retail store where customers browse products, filter by category, manage a shopping cart, place orders and view order history.

18 FreshBasket – Grocery Ordering

Create a grocery application where customers browse daily essentials, check product availability, add items to a cart and schedule order fulfilment.

19 ReturnEase – Retail Returns & Refunds

Develop a returns portal where customers submit return requests against eligible orders, provide a reason and track approval, pickup and refund status.

DOMAIN 4 | TELECOM, HI-TECH & PUBLIC SECTOR

20 ConnectCare – Telecom Service Portal

Build a telecom self-service application where customers view their plan, check usage, raise network or billing complaints and track service requests.

21 PlanSwitch – Mobile Plan Management

Create a portal where customers compare mobile plans, review benefits, request plan changes and view their current subscription details.

22 DeviceDesk – IT Asset & Support Portal

Develop an IT support application where employees report hardware or software issues, view assigned devices and track support tickets through resolution.

23 CloudDeploy – Software Release Tracker

Build a release management dashboard where teams register software releases, record environments, track deployment status and log issues or rollback decisions.

24 CivicConnect – Public Grievance Portal

Create a citizen service platform where people submit civic complaints, attach supporting details, receive a reference number and track the status of their requests.

25 PermitFlow – Online Application & Permit Tracking

Develop a public-service portal where applicants submit permit or certificate requests, upload required documents and track verification and approval stages.

INDIVIDUAL HACKATHON GUIDELINES

Each participant is expected to take ownership of the complete solution—from understanding the business problem to presenting a working application.

- This is an individual project. Each participant must independently plan, develop, test and demonstrate their application.
- Choose the technology stack, frameworks, database and development tools independently.
- Identify suitable application features, user roles, workflows and security requirements.
- Design the database and implement the required APIs and user interface.
- Prioritize a working end-to-end flow within the 2-hour time limit.
- Be prepared to explain the problem, solution approach, architecture, key technical decisions and application demonstration.
